Image to video

Prompt 1

A smooth, slow-paced motion graphic based on the provided image, retaining the exact world-like structure, visual layout, color palette, and background. The main world element slowly rotates horizontally along the X-axis with smooth, subtle motion, without vertical rotation. Premium aesthetic, sleek animation

For Google Antigravity

Prompt 1: Navigation Bar & Hero Section

Build the navigation bar and hero section following 1st-Page.png and 1st-Page-2nd-Part.png design references, incorporating Background.png, lst-page-image.png, 1st-page-video.webm, and video lightbox modal logic in script.js.

Prompt 2: Section 2 – Radar & Features

Build Section 2 following the 2nd-Page.png design reference using 2nd-page-image.png and 2nd-page-video.mp4, maintaining the design tokens, reusable component classes, and desktop layout in index.html and style.css.

Prompt 3: Section 3 – Privacy & Local Files

Build Section 3 following the 3rd-Page.png design reference using 3rd-page-image.png and 3rd-page-video.webm, applying the section badge, glowing headers, and dark surface styling in index.html and style.css.

Prompt 4: Section 4 – About Indie Team

Build Section 4 following 4rd-Page.png design reference using 4rd-page-video.mp4, ensuring desktop-only styling with clean index.html structure and reusable CSS classes.

Prompt 5: Footer Section

Build the final Footer section following the Footer.png design reference with navigation links, newsletter signup form, and copyright details using standard HTML and CSS in index.html and style.css.
